AURELIA HEALTH DEVICES

Aurelia Pulse One

Continuous cardiac telemetry for post-discharge recovery — a wearable patch that streams clinician-grade rhythm data for 14 days on a single charge, with no app setup required from the patient.

FDA 510(k) cleared · IP67 water resistant · Cellular — no phone needed

WHY CARE TEAMS CHOOSE PULSE ONE

1. **Zero-touch onboarding**
   The patch pairs itself over an embedded cellular link the moment it is applied. Discharge nurses report median setup time of 90 seconds per patient.

2. **Arrhythmia triage built in**
   On-device classification flags AF, pauses, and sustained tachycardia, so your monitoring team reviews events — not fourteen days of raw strips.

3. **EHR-native reporting**
   End-of-wear summaries arrive as structured documents in Epic and Oracle Health worklists, signed and ready for billing within 24 hours.

4. **Patients forget it's there**
   At 11 grams with a breathable hydrogel adhesive, Pulse One holds a 96% full-duration wear-compliance rate across 40,000 completed studies.

SPECIFICATIONS

Wear duration	Up to 14 days, single application
Channels	Single-lead ECG, 250 Hz sampling
Weight	11 g including adhesive frame
Dimensions	74 × 33 × 7.6 mm
Connectivity	LTE-M with 72-hour offline buffer
Battery	Sealed 315 mAh, no charging during wear
Water rating	IP67 — showering approved
Detection classes	AF, flutter, pause > 3 s, VT, bradycardia
Report turnaround	Preliminary in 2 h, final within 24 h
Ordering	Catalog AP1-214, boxes of 10
