HARBORLINE LOGISTICS · NETWORK PERFORMANCE BRIEF

2025: The year our middle-mile network stopped being the bottleneck

Over twelve months, Harborline consolidated 14 regional cross-dock facilities into 9 automated hubs, re-routed 61% of linehaul volume onto dynamic schedules, and moved dock-assignment decisions from nightly batch planning to a rolling 15-minute horizon. The result was the strongest service year in company history — achieved while absorbing an 18% increase in parcel volume and the addition of two national retail accounts. The figures below cover January through December 2025 across all 41 service regions.

> *"Hub dwell time is the number everyone watches now. Cutting it in half changed what our customers believe a two-day promise means."*
>
> MARISOL TEAGUE — CHIEF NETWORK OFFICER

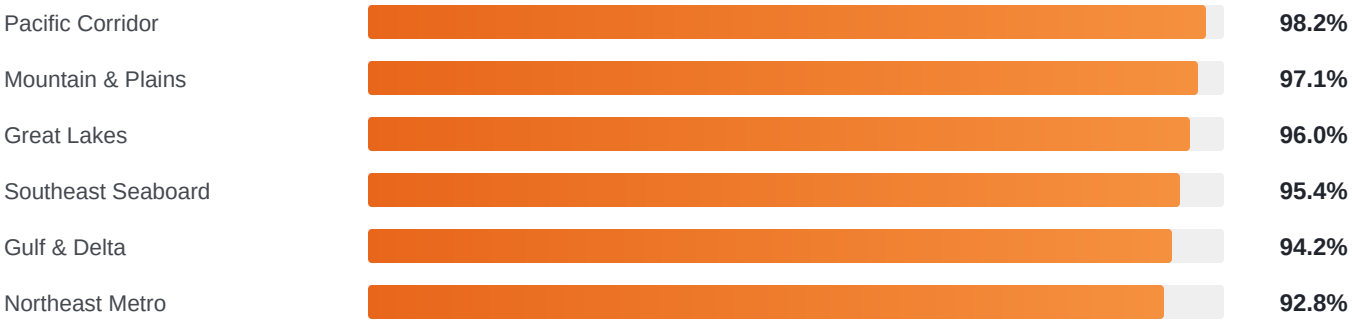

96.4%
On-time delivery across all service tiers, up from 91.2% in 2024

3.1 hrs
Median hub dwell time, down from 6.4 hours at the start of the year

-22%
Empty linehaul miles eliminated through dynamic backhaul matching

41M
Parcels moved through the automated hub network in peak quarter

ON-TIME PERFORMANCE BY REGION CLUSTER

Source: Harborline Network Telemetry Warehouse, audited January 2026. On-time defined as delivery within the promised service window excluding force-majeure days (4 in 2025). Dwell time measured door-in to door-out per parcel, median of hub medians. Figures for the Northeast Metro cluster reflect the Albany hub migration completed in October. © 2026 Harborline Logistics Corporation. For customer distribution.
